# Ibrahim Jaafar

## AI Specialist

Automation, AI agents and business systems. Based in Lebanon (Beirut time), working remotely; available to work US business hours. Open to remote roles and can start immediately.

ibrahim.lebanon.1997@gmail.com | ibrahim-jaafar.github.io | www.linkedin.com/in/ibrahim-jaafar-007270121

I turn complex operational problems into reliable AI systems, including workflow automation, multi-agent systems and secure internal platforms, and take them from first prototype to daily production use.

- I build and run my own multi-agent system (Hermes Agent on Telegram), used almost every day.
- 5+ years in engineering and manufacturing at Ghandour Solutions before moving into AI.
- Building with AI since ChatGPT's first release in late 2022.

## EXPERIENCE

### AI Specialist, Blue House Films

September 2026 – present, remote

Blue House Films is a film and social media company of about 100 people. I was hired to help the team work faster and more accurately with less repetitive work. I replaced scattered tools and manual workflows with one connected internal platform, and shipped 9 tools to production in my first six weeks, and I've kept building more since. On a typical day 50–60 staff use the platform: about 55 use Chat, 50 the Task Manager and 15 the SRT Cleaner.

As the main developer on the 3-person R&D team, I own the platform end to end. I design and build the tools, host and secure the server, and set up the company's GitHub and automated backups. I also review other developers' code, supervise the interns, train employees on each new tool, and run regular AI workshops for the developers. I discover what to build by sitting with each employee and having them walk me through their workflow, then analysing where their time and errors go.

**Ecosystem**
One connected platform and one source of truth. Every tool plugs into it as a plugin, and everything can be tracked.

**Task Manager**
Every task has an owner, a status and a deadline. Managers see progress live instead of chasing people, and changes appear on every device instantly.

**Mail**
Company email inside the platform with just an email and password, and instant notifications. Every message is checked for phishing and malicious content, and suspicious mail is clearly flagged.

**Chat**
Everyone now uses one internal chat instead of paid Slack seats. It's trackable, abuse can be reported to HR with proof, and nobody has to share a private number.

**SRT Cleaner**
A manager updates the word bank in one place and everyone has it instantly. Censoring follows one standard method, and a 30–90 minute manual editing task now takes seconds. It's in daily use across the company's news platforms.

**Admin panel**
One dashboard shows server health, backups, logins and malicious access attempts, and sends an alert when something needs attention.

**HR**
HR and the owners manage every employee in one place. Setting someone's role gives them exactly the tools they need, every change is logged with who made it, and marking someone as having left cuts their access to every tool at once.

**Insert Suggester**
I reviewed the intern's version, found 82 problems and reworked large parts of how it plans, searches and judges. It is now live on the company platform.

**Newsroom engine**
A news-intelligence engine for the company's newsrooms. Collects news from RSS feeds, GDELT and outlet scraping, then groups articles about the same event into stories across languages using AI embeddings.

### Freelance Software Developer, Independent

2023 – present

Desktop apps, AI and computer vision systems, data pipelines and automation tools for clients.

### Product Designer & Machinist, Ghandour Solutions

2021 – 2026

A company building solar battery systems, industrial machines and custom CNC-made parts. Product design, CAD modelling and CNC machining. I ran, maintained and repaired the FDM 3D printers and 3-axis CNC machines, and did electronics

prototyping and automation with Arduino and Raspberry Pi. I was also asked to streamline the company's workflow: I built CurveMill to fix its CNC file bottleneck. I also set up a Notion hub for the business, covering design, manufacturing, sales, finance, inventory, suppliers and staff training. After comparing ERP, PDM and PLM systems, I installed SolidWorks PDM so the engineers always work on the latest approved design files.

## SELECTED AI PROJECTS

### Agency report automation

Live demo: ibrahim-jaafar.github.io/agency-demo

A marketing report for two made-up agency clients, a skin clinic and a home-goods store. It pulls each client's leads and ad spend, sends conversions to Meta, checks the data for mistakes in plain code, and writes a short summary a client can read, for any day, week, month or year. Visitors can run it on clean data or break the data on purpose and see what the checks catch, explore the results on a client dashboard, and send test leads to watch them arrive.

n8n · GoHighLevel API · Meta Conversions API · Gemini (structured output) · JavaScript · Supabase

### Hermes multi-agent system on Telegram

Four bots, each with its own job, built with Hermes Agent. An orchestrator hands out the work and passes requests between them. All four are still running, and I use them almost every day, for myself and for friends.

Hermes Agent · Telegram · web scraping · Android emulator automation

### Furniture CAD-to-render pipeline

Product photos for a furniture line without a photo shoot. Products designed in SolidWorks are placed into photoreal scenes by Gemini image generation. Because image models get the scale of objects wrong, Claude also builds each scene in Blender through MCP, using the real furniture dimensions.

Claude Code · Blender MCP · Gemini image generation · SolidWorks

### MoneyPrinterTurbo Extended

Freelance project for a client who needed more control than the open-source MoneyPrinterTurbo gives. That tool writes a script, narrates it and assembles stock footage into a video. I replaced its interface with a React app and added AI matching between clips and script, so the footage fits what is being said. About 5,300 new lines of code, and the client was satisfied with the result.

Python · FastAPI · React · CLIP / SigLIP-2 · Whisper · FFmpeg

### PromptForge

Built for a social media startup that needed to produce post images at volume. Write one structured prompt and generate images from many AI providers at once (OpenAI, Gemini, Stability, Replicate, fal.ai, Ideogram, Cloudflare, Mistral and others). Each request is adapted to what the chosen model supports.

Next.js · TypeScript · SQLite · AES-256-GCM

## SKILLS

**AI and agents**
Claude, Claude Code, OpenAI Codex, Hermes Agent, MCP, OpenAI / Gemini / Groq / Mistral / OpenRouter APIs, structured JSON outputs, LangChain, RAG, embeddings

**Apps and backend**
Python, TypeScript, React, Next.js, FastAPI, Django, Supabase, Postgres, SQLite, Electron, Tauri, Streamlit and Plotly dashboards

**Vision and media**
YOLO, OpenCV, TensorRT, CLIP / SigLIP, Whisper, FFmpeg, ElevenLabs

**Business systems**
Notion (built a full business hub for Ghandour Solutions), SolidWorks PDM (selected and installed after comparing ERP, PDM and PLM systems)

**Automation and integration**
REST APIs, webhooks, web scraping, Telegram bots, Android emulator automation, n8n

**Infrastructure**
Oracle Cloud, Cloudflare R2, Vercel, Docker, GitHub, role-based access control

**Engineering**
SolidWorks (certified), Blender, CNC and 3D printing, Arduino, Raspberry Pi

**How I work**
Workflow discovery with each user, researching the best solution for each problem, planning with KPIs, limits and cost options before building, product requirements and architecture decision records, automated testing, code review, user training and AI workshops

## EDUCATION

Bachelor's in Mechanical Engineering, almost completed: one module and the final project remained when Lebanon's economic collapse interrupted my studies, and I moved into industry. I started coding while at university.

## LANGUAGES

Arabic (native), English (professional), Persian (good)

## CERTIFICATIONS

Anthropic: Claude Code 101, Introduction to Agent Skills, Introduction to Subagents
Certified SOLIDWORKS Design Professional
Certified SOLIDWORKS Additive Manufacturing Associate
PMI: Fundamentals of Predictive Project Management
LinkedIn Learning: Engineering Drawings for Manufacturing, SOLIDWORKS: Advanced Engineering Drawings
HP LIFE: Customer Relationship Management
